Software Developer with 1+ year of experience building mobile and web applications using **React Native**, **PHP**, and **Laravel**. Comfortable working across the full stack — from designing MySQL schemas and REST APIs to building clean, responsive UIs. Has shipped real features, worked with real users, and knows how to write code that others can read and maintain. Also brings a data analytics background with hands-on experience in Python, SQL, and business intelligence tools.

## EDUCATION

### SRM University

Sonepat, Haryana

*Bachelor of Technology in Computer Science Engineering (Cloud Computing and Mobile Apps)* May 2021 – November 2025

## EXPERIENCE

### Software Developer

February 2026 – Present

*Leading Dot Solutions*

*Noida, Delhi-NCR | Remote*

- Built a **React Native** mobile application with **10+ reusable components**, improving UI consistency and cutting render time by **20%** through optimized state management.
- Developed a complete **user authentication and management system in PHP**, covering registration, login, session handling, and bcrypt password security — tested against **100+ simulated user flows**.
- Built a **Laravel** backend with **15+ REST API endpoints**, handling data flow between frontend and database with clean route structuring and middleware.
- Designed a **MySQL** database schema with **5+ normalized tables** and wrote optimized queries that cut average execution time by **25–30%**.

### Data Analyst Intern

December 2025 – January 2026

*Red Dot Foundation – Safecity*

*Mumbai, Maharashtra | Remote*

- Built **interactive dashboards and analytical reports** (bar charts, pie charts, word clouds) to surface safety incident trends across locations and time periods for local police authorities.
- Cleaned, validated, and standardized **20,000+ records** to ensure data quality and reliability across all downstream analysis.
- Translated raw incident data into **actionable insights** that directly supported data-driven decision-making for public safety stakeholders.

### Google Developers Club – Lead

June 2021 – January 2025

*Centre for Innovation, SRM University*

*Sonepat, Haryana*

- Led **5+ cross-functional student teams**, organized technical workshops, and helped **100+ students** build collaborative development habits using Git and agile practices.

## PROJECTS

### PHP Authentication Management System | *PHP, MySQL, XAMPP, Apache*

March 2026

- Built a full-stack **user authentication system** in PHP with secure registration, login, and session management backed by a **MySQL** database on a local **Apache (XAMPP)** server.
- Stored passwords using **bcrypt hashing** via `password_hash()` and `password_verify()` — no credentials anywhere in the system.
- Implemented **session-based access control** so only authenticated users can reach the dashboard, with automatic redirects for anyone who isn't logged in.
- Structured the app across `index.php`, `home.php`, `dashboard.php`, and `logout.php`, handling the full request lifecycle including clean session teardown on logout.

### React Native Task Manager App | *TypeScript, JavaScript, React Native, Tailwind CSS*

March 2026

- Built a cross-platform **Task Manager app** using **React Native** and **TypeScript** with full **CRUD** support for tasks and notes on both Android and iOS.
- Used **AsyncStorage** to save data locally so the app works smoothly even without an internet connection.
- Structured the UI with **reusable components** and **Tailwind CSS**, handling async state cleanly to keep the interface fast and responsive.

- Wrote the entire codebase in **TypeScript** to catch errors early and keep the code easy to maintain as the app grows.

### India–EU FTA Trade Analysis (Mother of All Deals) | *Python, SQL, Excel*

January 2026

- Built an end-to-end **trade analytics project** on the India–EU Free Trade Agreement, covering data collection, cleaning, normalization, and modeling to evaluate how tariff changes affect pricing and market outcomes.
- Analyzed a product-level dataset of **37 passenger vehicles** across multiple segments, modeling **tariff pass-through and price sensitivity** scenarios for domestic vs. EU-imported cars.

### Business and Market Analysis – Zomato Dataset | *Python, Pandas, Matplotlib*

January 2026

- Ran **exploratory data analysis** on **10,000+ business records** to identify market performance trends, customer behavior patterns, and pricing dynamics across multiple regions.
- Built comparative dashboards and visualizations to **benchmark competitors** and deliver strategic, data-backed business insights.

## TECHNICAL SKILLS

---

**Languages:** PHP, TypeScript, JavaScript, Python, C, SQL

**Frameworks & Libraries:** React Native, Laravel, Pandas, NumPy, Matplotlib

**Databases:** MySQL, AsyncStorage

**Developer Tools:** Git, XAMPP, Apache, phpMyAdmin, Jupyter Notebook, Microsoft Excel, Power BI, Tableau, Google Cloud Platform

**Concepts:** REST APIs, Authentication & Authorization, Session Management, CRUD, Component-Based Architecture, Data Cleaning, EDA
